

*The Atlantic Salmon Ecosystems Forum Science... Restoration.*

*Connecting the dots.*

January 8-9, 2014 from 8:00am-4:00pm

University of Maine, Orono ME

Website: <http://atlanticsalmonforum.org/>

This meeting is comprised of a series of presentations that will focus on the science and management of key diadromous species in the Northwest Atlantic (i.e., New England and Canada) with particular consideration given to Atlantic salmon. A broad spectrum of topics pertaining to freshwater, estuarine, and marine phase ecology will be covered. These science-based presentations will focus on 1) specific biological/ecological questions that inform management actions, 2) the implications of management actions on various species, and 3) identification of future management needs and research goals. Presentations will be fifteen minutes each with questions and answers. Breaks will be offered and refreshments will be served. Scientists, managers and students of diadromous species populations and ecosystems are encouraged to participate. This event requires registration (please see the website at the following location for details: <http://atlanticsalmonforum.org/>).
